bio

i'm a software engineer who focuses on performance, accessibility, and user experience. i believe a fast and user-friendly website is critical to success on the Web. software should be enjoyable to use! i also think software should be enjoyable to work on; i'm looking for a team that agrees and has well-defined processes and adheres to high code quality standards

things i work with

- HTML
- CSS/Sass
- JS/TS
- React
- Node
- Jest
- GraphQL
- a11y
- i18n
- SQL & NoSQL
- Figma
- Git
- GNU/Linux
- CI/CD

Front-end Engineer *March 2020 - October 2022*

@ Academia.edu

improved Core Web Vitals for our site's primary content page in preparation for Google's CWV rerank – Lighthouse performance score improved from ~7 to 95+ on desktop and 75+ on mobile. upgraded key dependencies (React, Node, Storybook) and lowered build times with Webpack optimizations and esbuild. started implementation of a new brand-focused design system. led development of a redesigned tabbed search page with robust filtering

Interactive Developer *September 2017 - June 2019*

@ GS&F

led UI development of a data visualization and system audit React app. contributed to development of a custom CMS and statically-rendered website in React and GraphQL, backed by a NoSQL database. mentored other developers by pair programming, through code review, and by leading lunch and learns

Developer *July 2016 - September 2017*

@ LKQ

wrote client and server-side JavaScript for technical support workflows within the ServiceNow platform. created a Vue app for sprint poker with a Node backend using WebSockets
